

NICK TRAN

San Diego, CA | Open to relocation

vnghi1308@proton.me | [LinkedIn](#)

Certifications: PMP | Stanford ML

TECHNICAL SKILLS

Program Management: Agile/Scrum | Kanban | Phase Gate | Roadmapping | Sprint Planning | Release Coordination | Schedule & Milestone Ownership | Risk Management | Cross-Function Stakeholder Alignment | Software Development Life Cycle

PM Tools: Jira | Confluence | MS Project | Google Workspace | Asana | Slack | GitHub | iWork | Microsoft Suite | Adobe Premiere

Technical: Python | SwiftUI | Swift | SQL | JavaScript | React | Node.js | REST APIs | Docker | AWS | CI/CD | Cypress

AI / ML: Large Language Models | Retrieval-Augmented Generation (RAG) | Claude Code | Chain-of-Thought (CoT) | On-device ML

EXPERIENCE

AI Program Manager Intern

May 2025 - Aug 2025

Apple, Cupertino, CA

- Spearheaded a AI/ML enablement program across 35 global partner sites, managing the end-to-end development of five technical curriculums to deliver on-device machine learning education to 10,000+ learners.
- Engineered the SwiftUI frontend for image classifier educational apps, aligning XFN engineering and design teams to translate "Liquid Glass" mockups into functional, deployable features that accelerated prototype launch by 20%.
- Architected a centralized strategic intelligence database to track partner feedback and program deliverables, translating complex raw data into actionable insights to drive roadmap decisions for XFN leadership teams.
- Conducted technical deep-dives on model chaining and RAG capabilities, synthesizing industry literature to define foundational requirements for 3 upcoming machine learning features and accelerate future cross-functional product planning.

Software Research Engineer – AI Systems

Sep 2023 - Aug 2025

USC Institute for Creative Technologies, Los Angeles, CA

- Developed and scaled full-stack features for the PAL3 iOS adaptive learning platforms, managing mobile QA and release readiness to ensure stable deployments for defense stakeholders.
- Engineered a full-stack Node.js web application for an interactive AI teaching agent, architecting a RAG pipeline with Pinecone and GPT-4o-mini to transform course videos into a real-time query database.
- Evaluated technical system tradeoffs for real-time AI API integrations, benchmarking latency and rendering quality to establish MLOps performance baselines and define strict constraints for production scaling.
- Co-authored and published peer-reviewed research on scalable AI pedagogical agents, presenting full-stack system evaluations and scalability insights to the broader educational technology community.

Software Research Assistant – Data Pipelines

Oct 2024 - Dec 2024

University of California, San Diego, La Jolla, CA

- Automated research data pipelines in Python to process speech datasets and cut analysis time by 40%.
- Developed a task to collect spontaneous speech, creating a corpus of 100+ bilingual speakers across four regions.

Supply Chain Coordinator

Mar 2022 - Nov 2022

C. Pacific, Norwalk, CA

- Managed end-to-end delivery for 50+ monthly shipments, designing automated tracking to ensure 99% on-time SLA fulfillment.
- Conducted data-driven root cause analysis on operational workflows, identifying bottlenecks to boost efficiency by 15%.
- Enforced FDA standards across vendors to eliminate compliance bottlenecks, keeping product launches 100% on schedule.

Technical Program Manager

Jan 2020 - Dec 2021

Intelligence4start, Melbourne, Australia

- Led enterprise user-research cycles that shaped the roadmap and informed a projected \$1M+ revenue pipeline.
- Owned weekly status reporting to leadership, translating technical milestones into business KPIs for clients.
- Architected e-commerce dashboard system designs, defining high- and low-level specs to speed up feature rollouts by 35%.
- Engineered mobile-first, SEO-optimized web solutions for client platforms, lifting conversion rates by 18%.
- Mapped business requirements to system architecture via technical blueprints to reduce defects by 30%.

PROJECTS

AI Teaching Agent Demo	Jun 2024 - May 2025
Architected and delivered a four-stage system integration (RAG, GPT-4, voice cloning, video synthesis) processing 13 lecture videos into an interactive Q&A system with five-second response latency; published at AIED 2025.	
PlainTalk: Grounded Health-Document Assistant (M.S. Capstone)	Aug 2026 - Dec 2026
- Designed a rigorous AI evaluation framework to benchmark accuracy, latency, and hallucination thresholds, routing queries to a deterministic abstention path when retrieval confidence falls below target metrics. - Building a React and FastAPI application that simplifies patient health documents using a Chroma-backed retrieval pipeline.	

EDUCATION

Master of Science in Computer Science, AI & Machine Learning	Jan 2023 - Dec 2026 (Expected)
<i>California State University, Fullerton, CA GPA: 3.9/4.0</i>	
AI & Machine Learning Bootcamp	Jun 2023 - Jan 2024
<i>California Institute of Technology</i>
